It will expire in 249 days on November 30, 2025. Recent updates: \* Last WHOIS update: Friday, November 3, 2023 \* Webserver software used: "UploadServer" \* Server locations: United States Additional features and tools available with an account or login: \* IP Address Country Lookup \* IP Address Blacklist Check \* IP Address To Country API \* IP Address Location Database Offred asked if the iPad issue was more significant than trust, and meditrina replied that even non-porn users can get pop-ups from "Local Slags" due to random site ordering in settings. CaptainHindsight questioned Offred's claim of a shadow, suggesting the block pop-up toggle might be activated, while meditrina reported that their website data showed sites listed by size rather than duration. cloudbuster revealed that they have been open about their feelings on pornography, but their partner's lack of respect for their views has led to trust issues. #### Women have varying views on pornography, with some accepting it, loving it, or being neutral about it. However, the author has strong feelings against it and doesn't understand why their partner doesn't share the same views. The author recalls an incident where their partner deleted his porn DVDs, but when they later found out he had kept checking his internet history for pornography, it broke the trust between them. The author argues that their partner's actions demonstrate a lack of respect for their feelings and choices, particularly regarding pornography. They believe that checking one's partner's internet history is a significant breach of trust and can be a major issue in relationships. Many others who have commented on this topic agree with the author's perspective, emphasizing the importance of respecting each other's views and boundaries, even if they differ. They suggest that relationships require communication and understanding, particularly when it comes to sensitive topics like pornography. However, some commenters seem to downplay the significance of the issue or question the accuracy of the partner's claims about the size of the files. Nevertheless, the author emphasizes that the fact remains - their partner's actions have caused them emotional distress and broken trust in their relationship. it seems like the op is struggling with trust issues due to her dp's past actions. she doesn't believe he's completely stopped watching porn, even though he claims to have deleted his history. offred pointed out that there are valid reasons for clearing browser history, but in this case, it's suspicious given his past lies about stopping. theCrumpetQueen chimed in with a personal test, showing how streaming videos can result in small file sizes being recorded in history. cloudbuster seemed confused by this, but later thanked crumpetqueen for clarifying their question. meanwhile, grumpasaurus shared her own story of struggling with similar issues in past relationships, highlighting the importance of trust and respect in partnerships. I had a breakdown and openly discussed my vulnerabilities with him, but surprisingly he understood me without judgment. I have no reason to believe he's broken this trust since then. If he did, it would be devastating to me due to the breach of faith, rather than the content itself.
